VISUAL REPORT

MY TEAM 4 - 2 RIVAL TEAM

1. Main team statistics

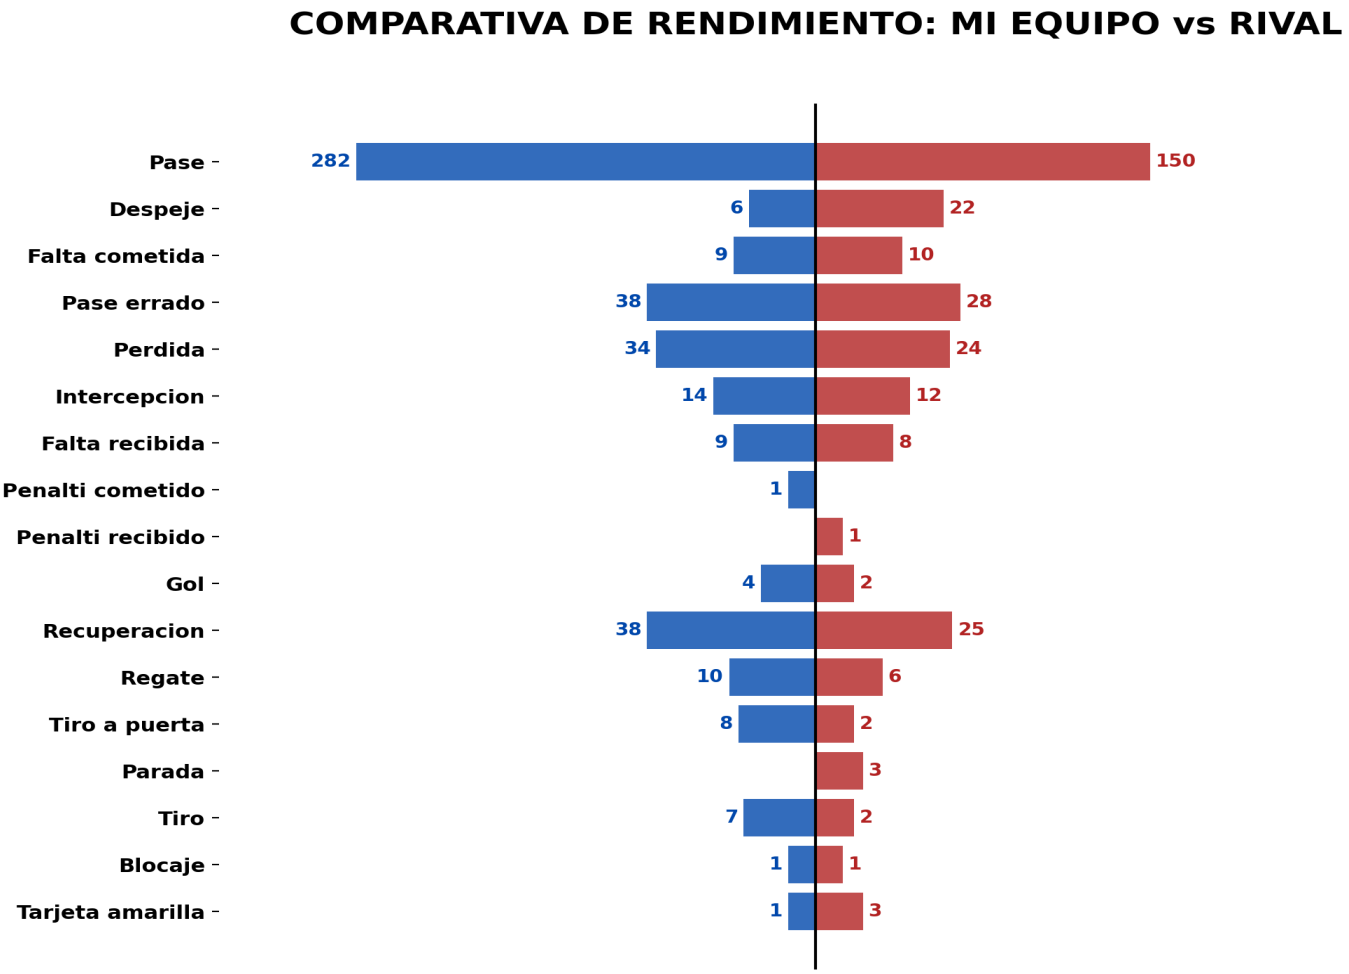

Team	Goals	Shots	Shots on target	Passes	Recoveries	Interceptions	Losses
My Team	4	7	8	282	38	14	34
Rival Team	2	2	2	150	25	12	24

1.1. Key findings

1. My Team completed more passes than the Rival Team, recording 282 passes compared with 150.
2. My Team scored more goals than the Rival Team, with 4 goals compared with 2.
3. My Team recorded more shots on target than the Rival Team, with 8 compared with 2, and also had more shots off target, with 7 compared with 2.
4. My Team recorded more ball recoveries than the Rival Team, with 38 compared with 25.
5. My Team had more ball losses than the Rival Team, recording 34 compared with 24.

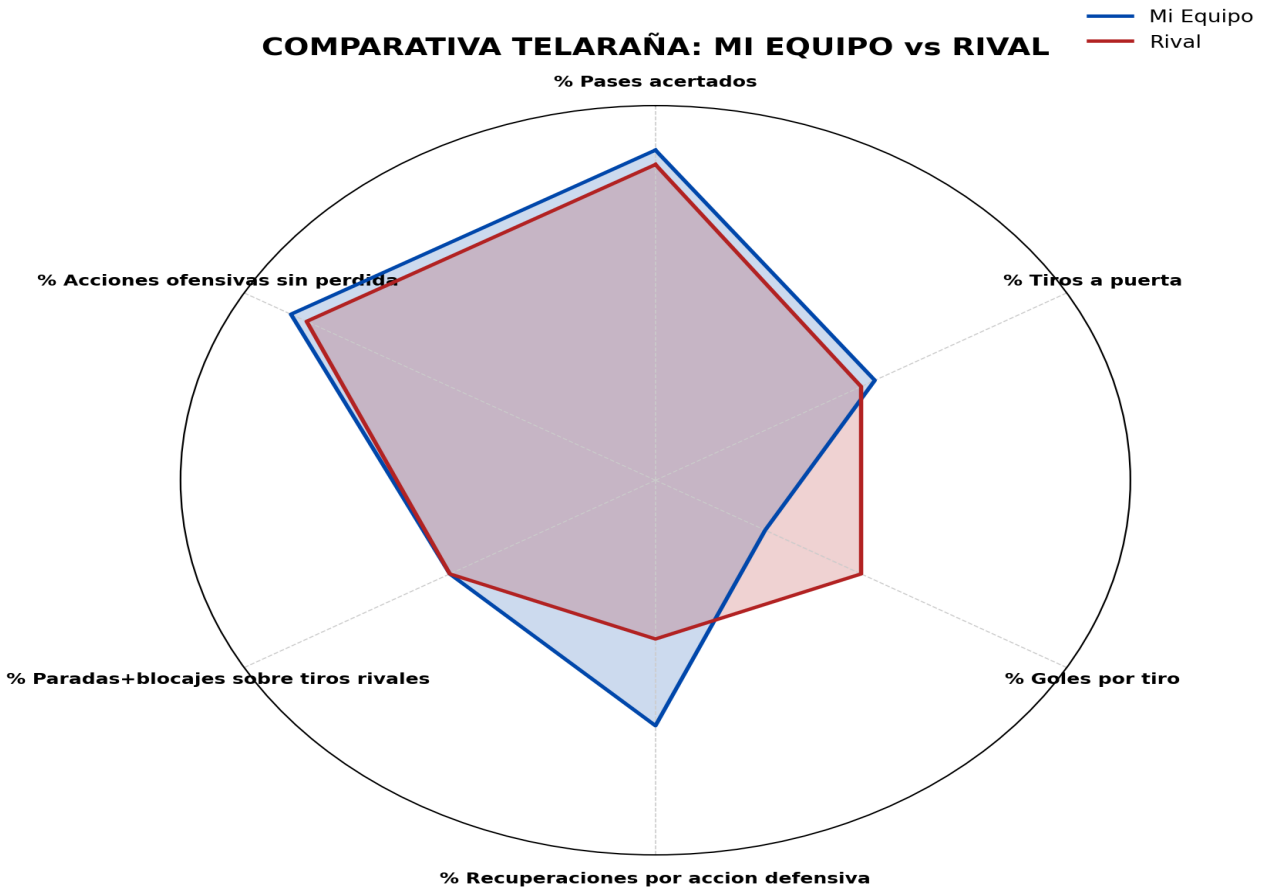

2. Team comparison

2.1. Game volume

The tornado chart highlights large volume gaps between the two teams. My Team recorded substantially more pase (282 versus 150) and tiro a puerta (8 versus 2), alongside higher perdida (34 versus 24) and pase errado (38 versus 28), while the Rival Team had more despeje (22 versus 6) and parada (3 versus 0). My Team also showed more recuperacion (38 versus 25). These differences indicate greater pase and tiro a puerta volume from My Team versus more despeje and parada from the Rival Team, with falta counts comparable.

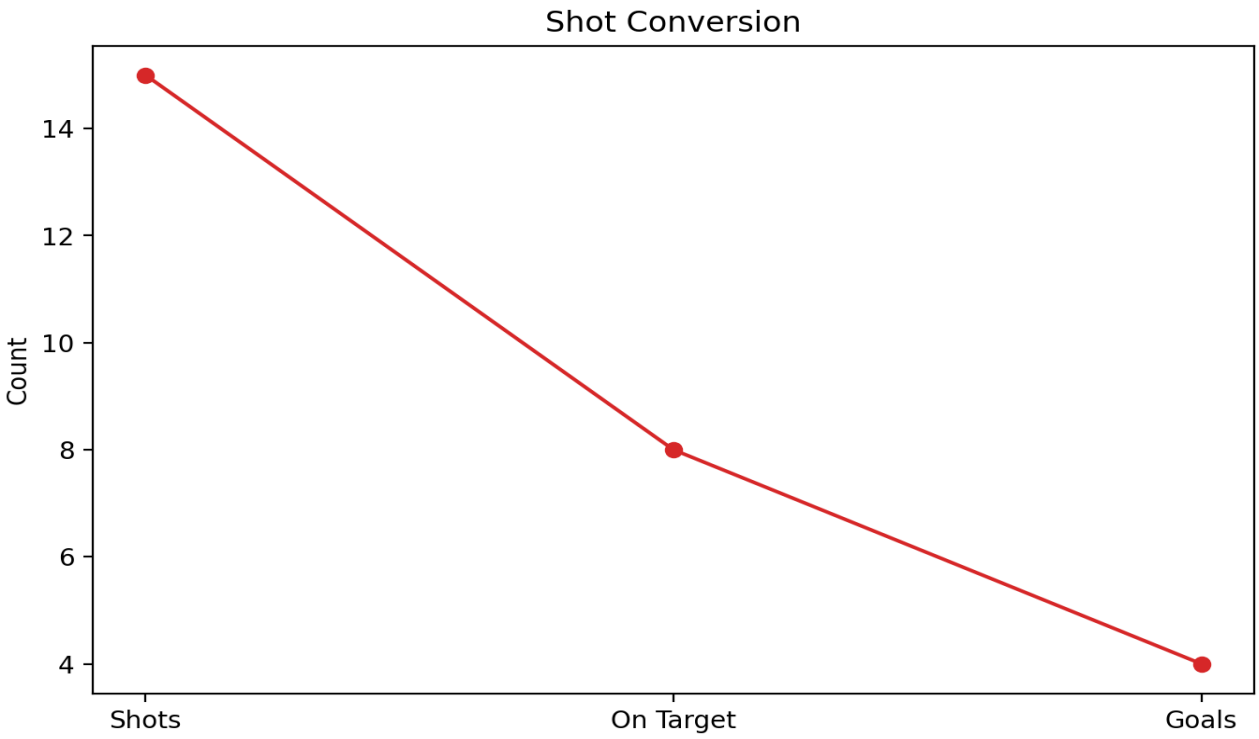

2.2. Game performance

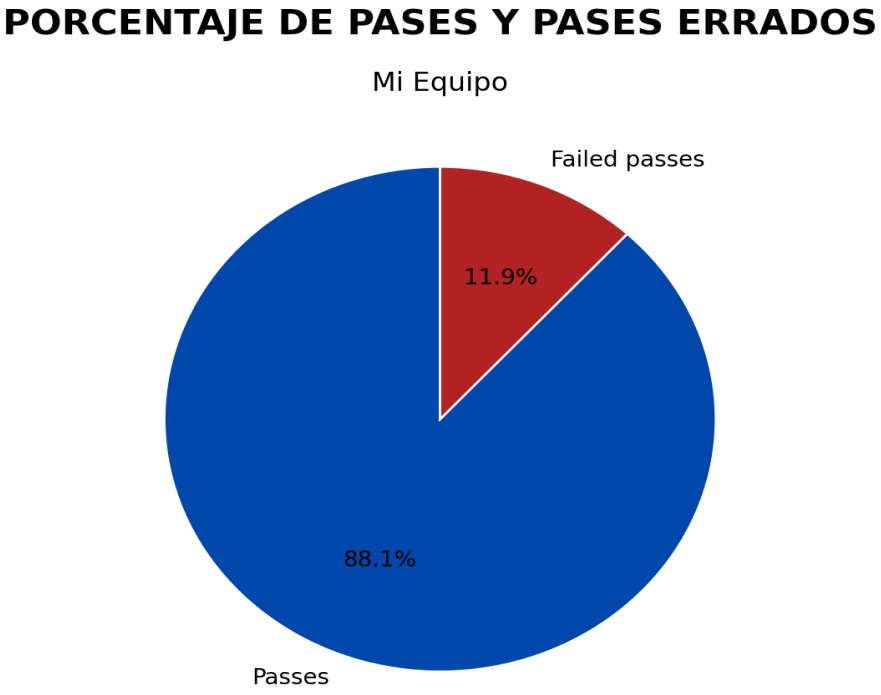

The largest gaps appear in finishing efficiency and defensive recoveries, where the Rival Team converts 50.0% of shots into goals versus My Team's 26.7%, a difference of 23.3 percentage points, and My Team records recoveries in 65.5% of defensive actions compared to the Rival's 42.4%, a gap of 23.1 percentage points. Both teams share 50.0% for save or block rate on opponent shots. My Team registers 88.1% pass accuracy against 84.3% and 88.6% offensive actions without loss against 84.8%, each difference 3.8 percentage points, while shot accuracy on target is 53.3% for My Team and 50.0% for the Rival, a 3.3 percentage-point gap. These patterns indicate My Team shows higher retention in passing and defensive actions while the Rival shows higher shot conversion, with both teams demonstrating comparable shot-stopping.

** Escala porcentual (0 a 1) basada en las métricas definidas.*

3. Offensive analysis

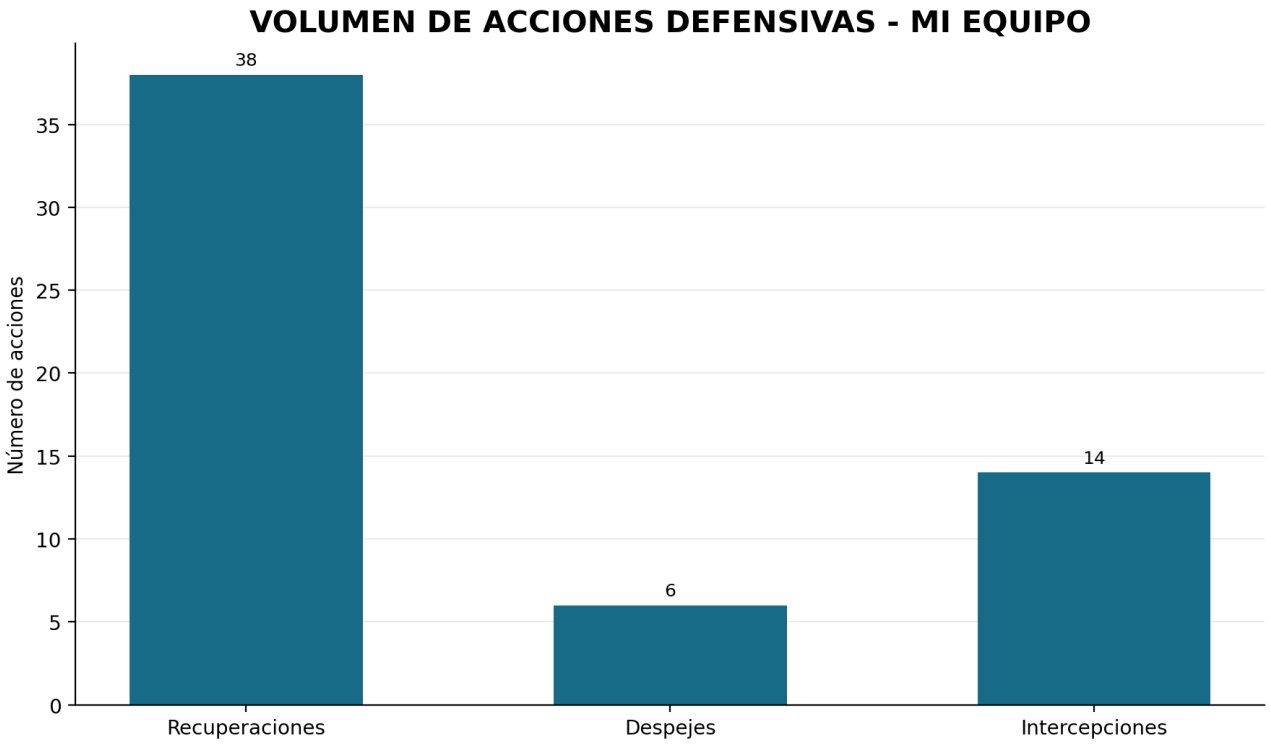

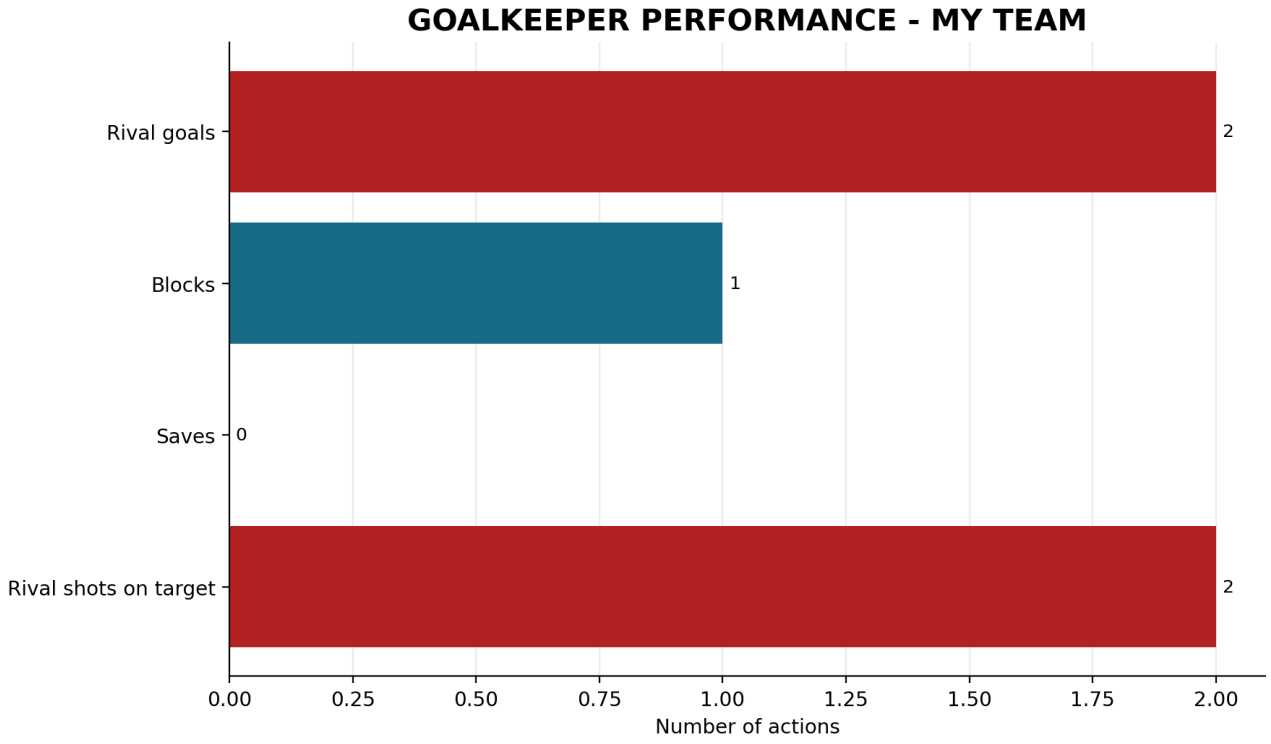

DRIBBLES	LOSSES
10	34

3.1. Offensive findings

The team completed 88.1% of 320 passes, showing high accuracy, and scored 4 goals from 15 shots (26.7% conversion) with 8 on target, indicating clinical finishing. Only 10 dribbles suggest a passing-oriented approach, while 34 losses reveal frequent turnovers. The combination of precise passing and efficient shooting was offset by ball losses that could hinder sustained attacks. Recommendation: work on reducing turnovers to protect possession and generate more chances.

4. Defensive analysis

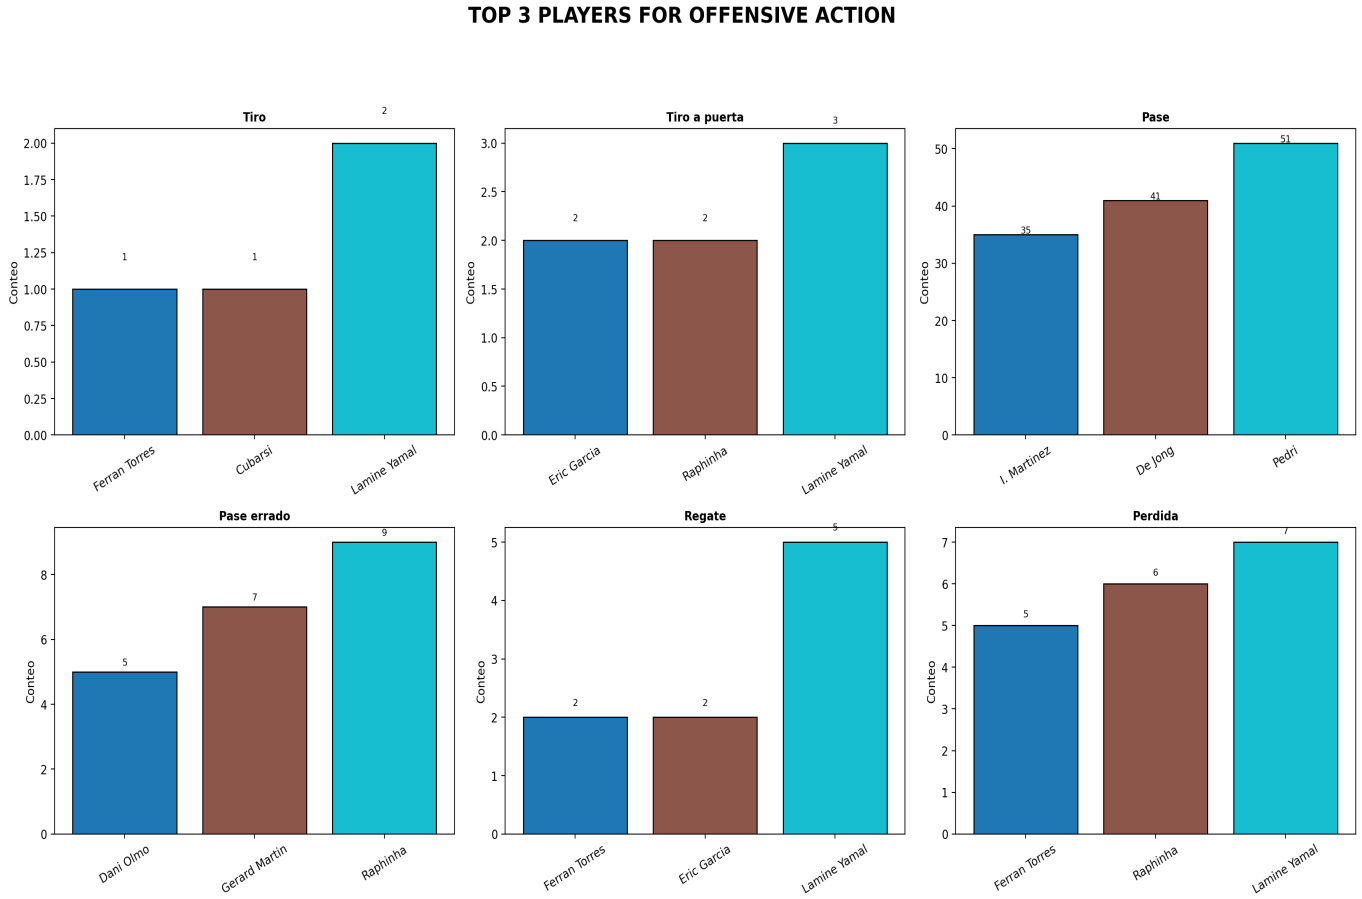

FOULS COMMITTED	YELLOW CARDS	RED CARDS
9	1	0

4.1. Defensive findings

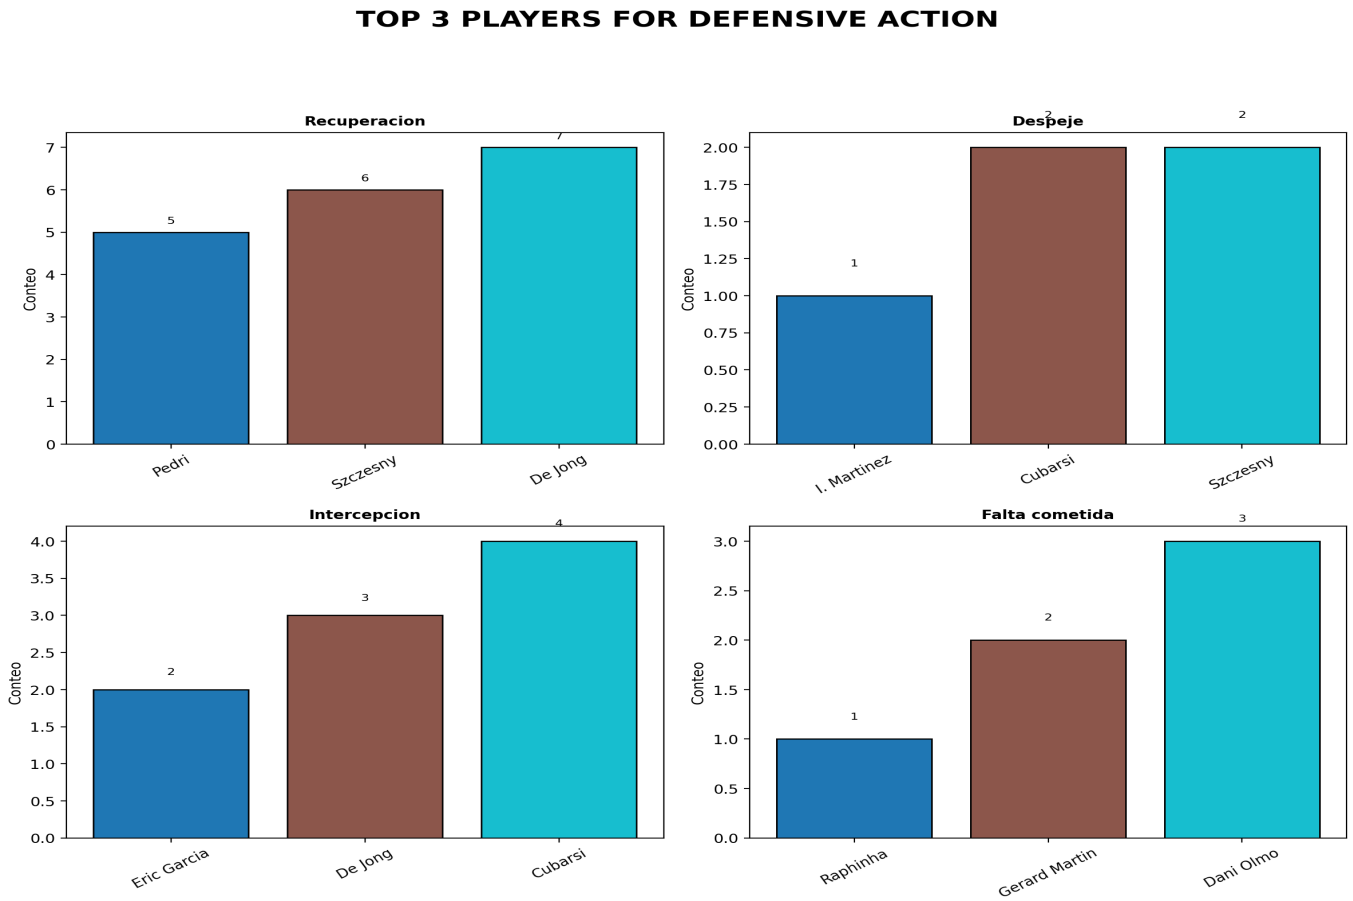

Overall, the defensive performance showed frequent ball regain with 38 recoveries and 14 interceptions but 6 clearances. The goalkeeper faced 2 shots on target, making 0 saves but recording 1 block, while conceding 1 penalty and 1 additional goal. The defense committed 9 fouls and earned 1 yellow card. These figures indicate the goalkeeper was rarely challenged by shots on target yet vulnerable to the penalty and one finishing effort, with the block preventing another scoring chance. The coach should focus on reducing fouls in dangerous areas to limit future penalty concessions.

5. Player statistics

5.1. Top 3 players for offensive action

5.2. Top 3 players for defensive action

6. Strengths, weaknesses and recommendations

TEAM STRENGTHS

- Passing volume and accuracy: 282 passes completed at 88.1% accuracy, significantly higher than the rival's 150 passes at 84.3%. This shows the team can sustain ball circulation and retain possession through technical execution.

- Chance creation and goal output: 15 total shots (8 on target) resulting in 4 goals. The team generated more shooting opportunities and converted them effectively.

- Defensive recovery rate: 38 recoveries with a 65.5% success rate on defensive actions, well above the rival's 42.4%. The team regains the ball frequently when possession is lost.

AREAS FOR IMPROVEMENT

- Shot conversion efficiency: Despite creating more chances, the team converted at 26.7% versus the rival's 50.0%. Chances were available but not fully capitalized on.

- Turnover frequency: 34 ball losses and 38 pass errors disrupted attacking continuity. These interruptions reduced the time the team spent in final-third positions.

- Fouls leading to set-piece danger: 9 fouls committed including 1 penalty conceded. Defensive actions in dangerous areas left the team exposed to direct scoring opportunities.

TRAINING FOCUS

- Finishing under match conditions: Work on converting available chances more consistently, particularly from positions inside the penalty area.

- Retention during transitions: Practice maintaining composure and passing accuracy when under pressure, reducing losses during ball circulation.

- Defensive discipline in critical zones: Reduce fouls in high-danger areas through positioning awareness and controlled defensive engagements.

7. Detailed data

7.1. Teams data

team	pase	despeje	falta cometida	pase errado	perdida	interc epcion	falta recibida	penalti cometido	penalti recibido	gol	recuperacion	regate	tiro a puerta	parada	tiro	blocaje	tarjeta amarilla
